

Introduction to Ionic Framework fundamentals

Native apps
Hybrid apps

Native apps

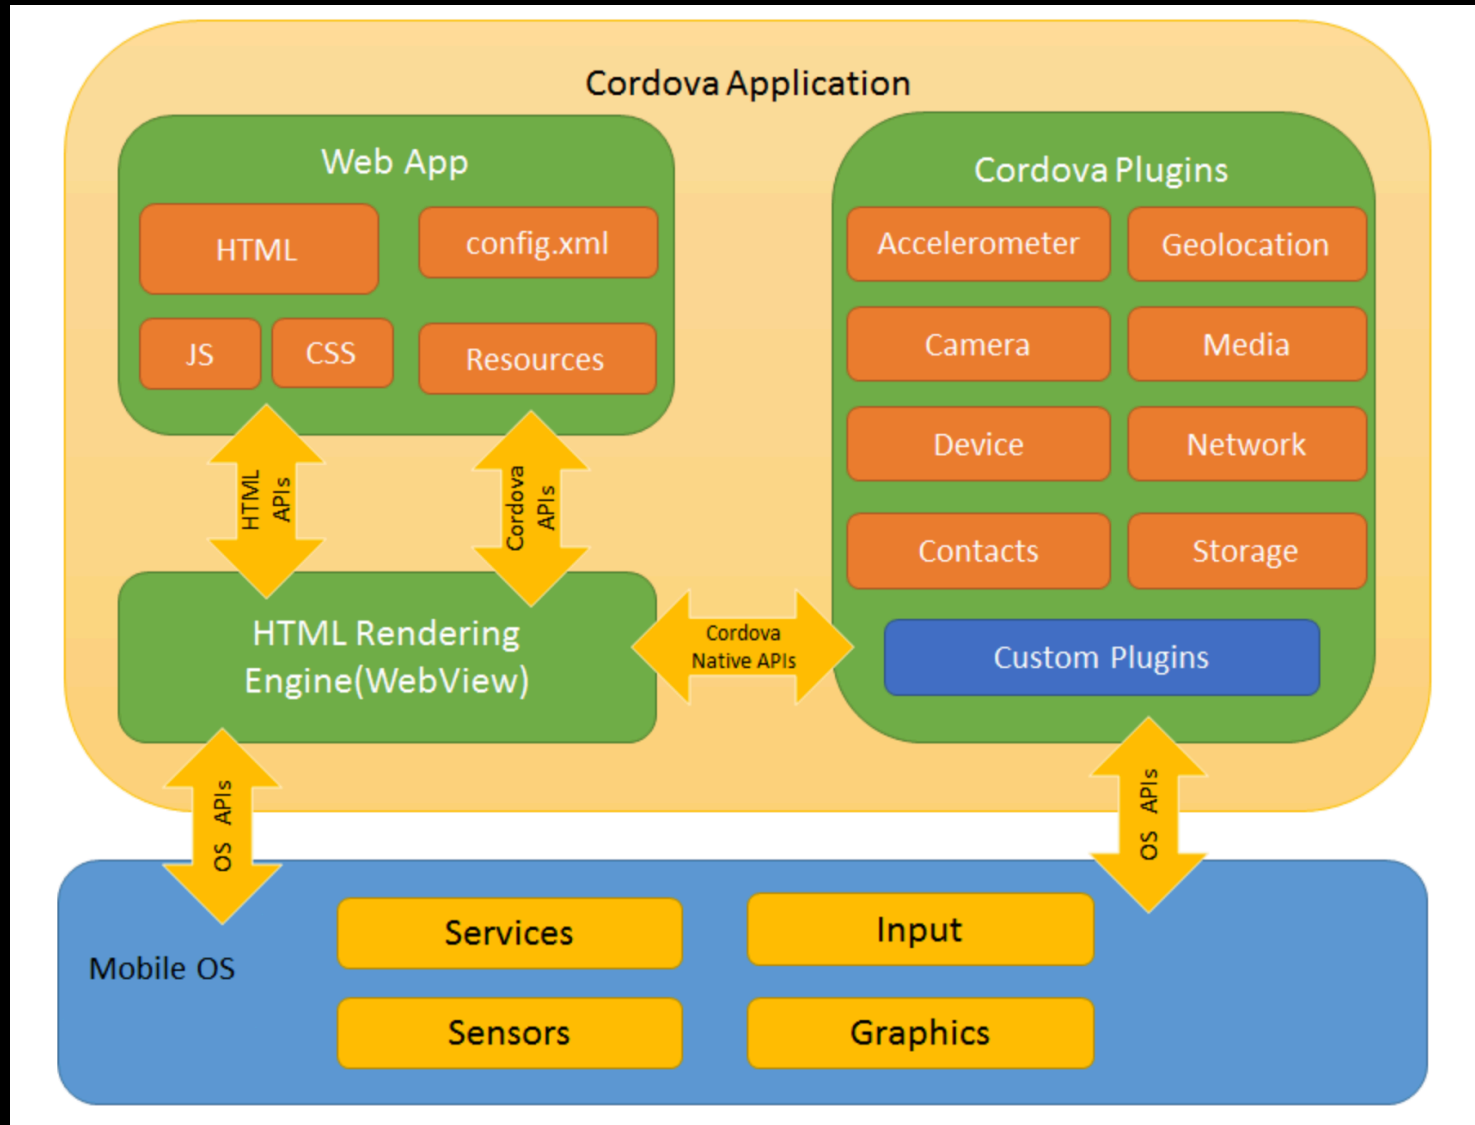

- Platform specific:
 - iOS - Objective C, Swift
 - Android - Java, Kotlin, C++
- Wide variety of uses cases
- Fluid User experiences
- Expensive to build, time consuming

Hybrid Apps

- Cross-platform:
 - Written in JavaScript using Frameworks like Ionic, React Native
 - Single code base running on different platforms
- Native capabilities using plugins
- Good enough performances
- Easier and faster to build

	Native Apps	Hybrid apps
Crossplatform	No	Yes
Pace of Development	Slow	Fast
Ease of development	A bit difficult	Easier
Native Capabilities	Yes	Yes
Performance	Pretty fast	Fast enough
Written in	iOS: Swift, Objective-C Android: Java, Kotlin	JavaScript using frameworks like Ionic, React native etc.

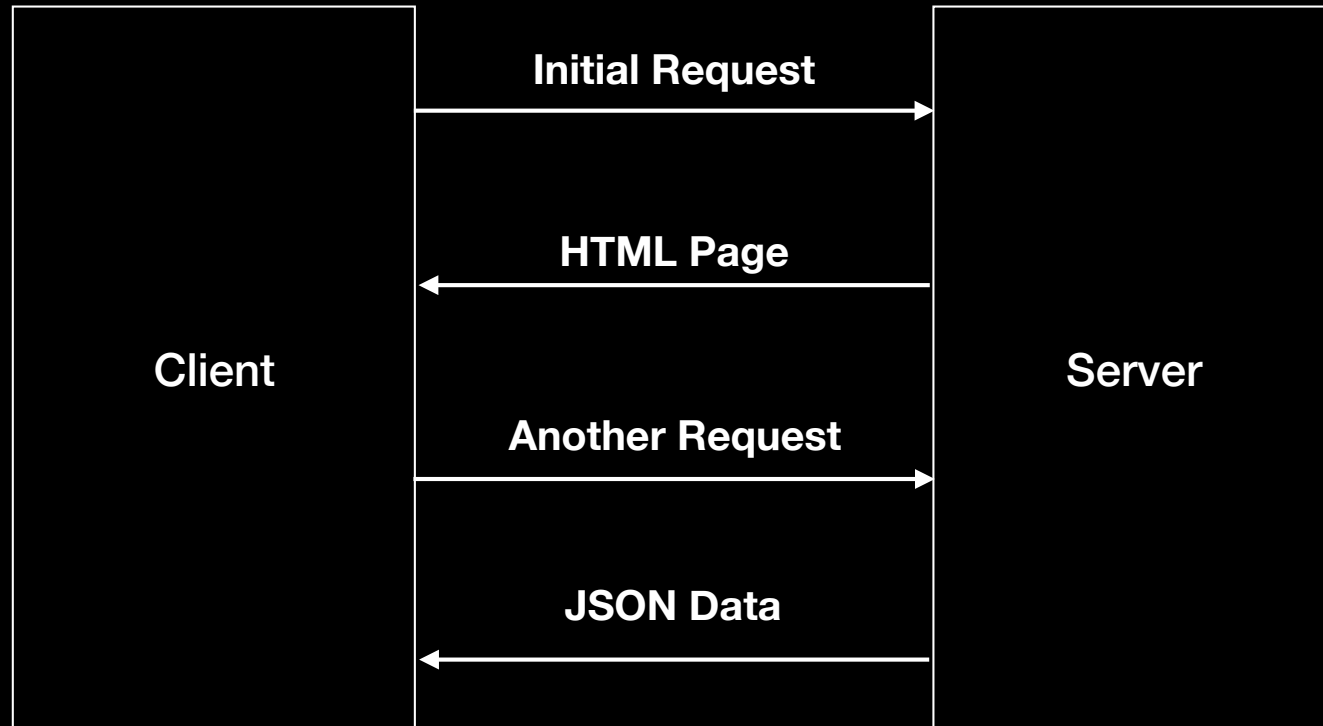

Single Page Applications

Traditional Webpages

Single Page Webpages

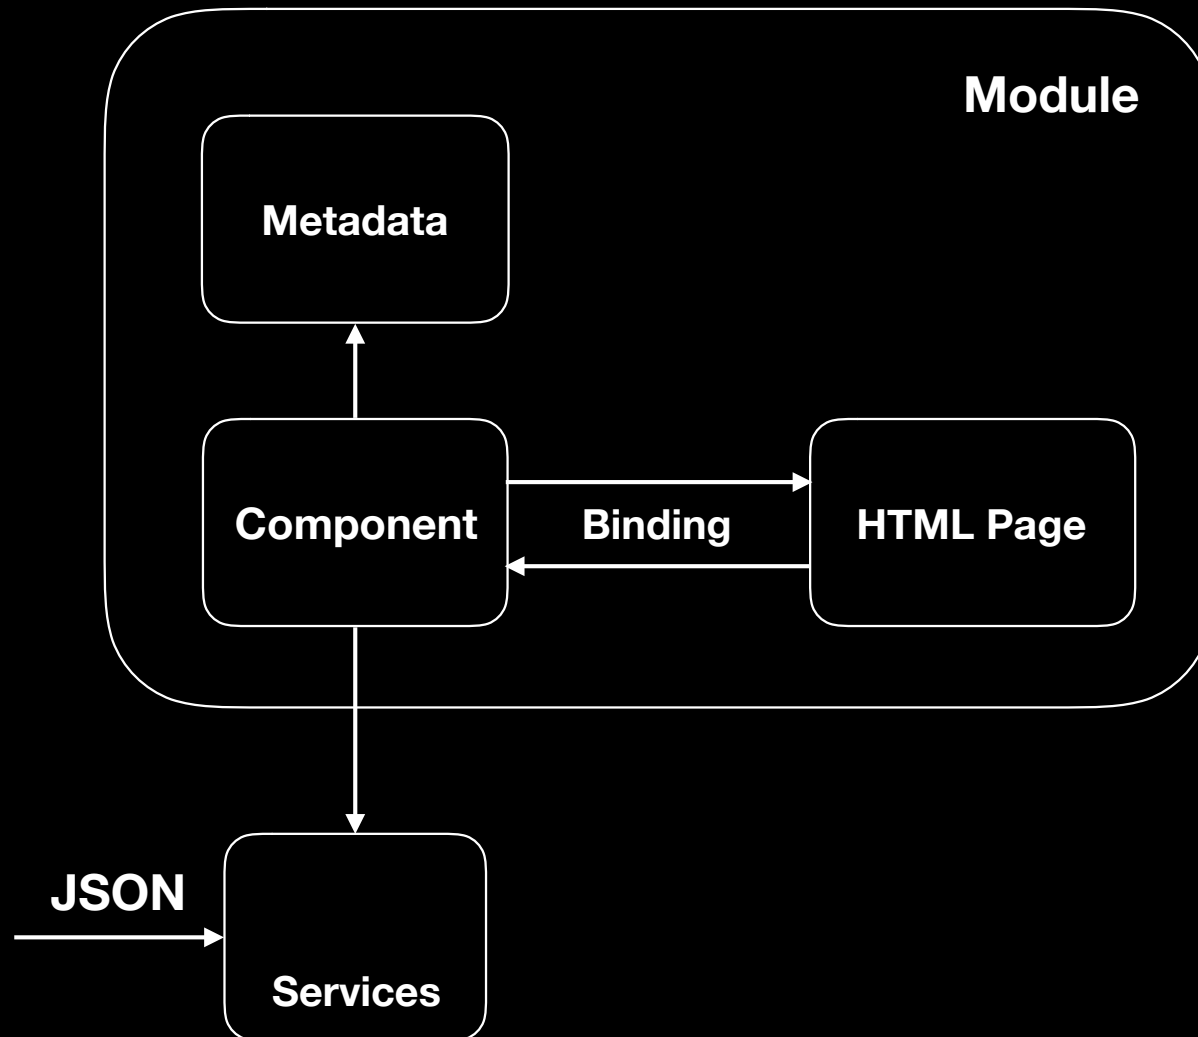

A popular Open-Source project

MVC architecture

Angular Architecture

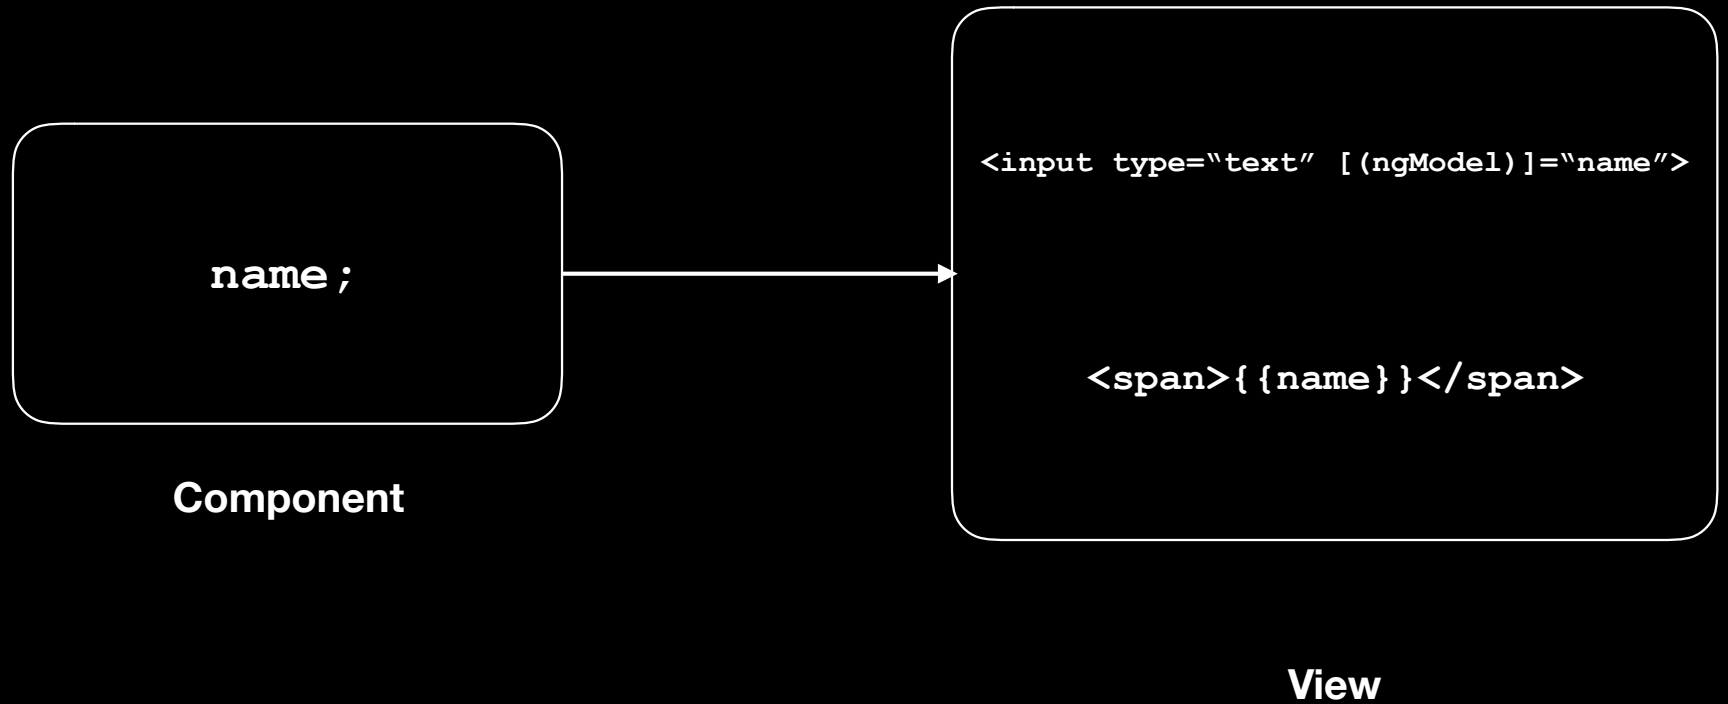

Angular Binding

- Interpolation

Angular Binding

- Two way Binding

```
<html>

<head>
  <title>Title</title>
</head>

<body>
  <h1>This is heading</h1>
  <ul>
    <li>One</li>
    <li>Two</li>
  </ul>
</body>
```

This is heading

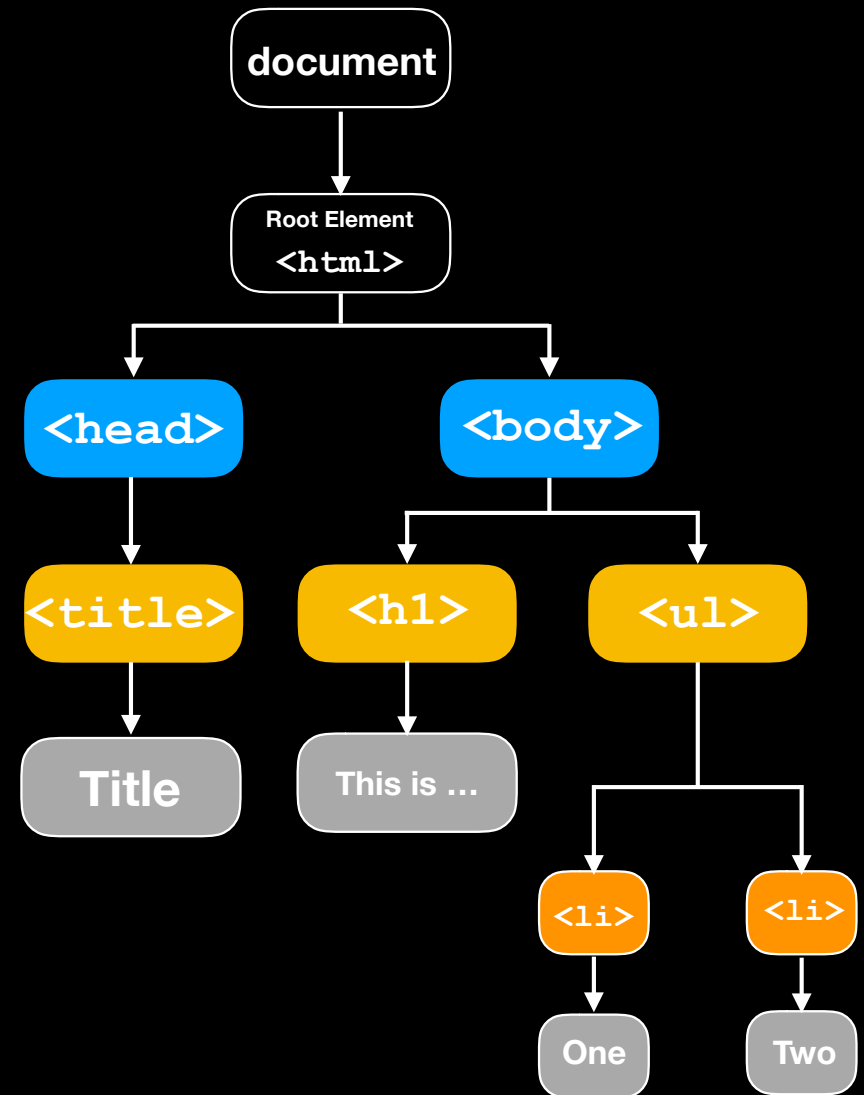

- One
- Two

DOM

```
<html>

<head>
  <title>Title</title>
</head>

<body>
  <h1>This is heading</h1>
  <ul>
    <li>One</li>
    <li>Two</li>
  </ul>
</body>
```

*ngFor Directive

```
models = [  
  {title: "One"},  
  {title: "Two"}  
]
```

```
<html>
```

```
<head>
```

```
  <title>Title</title>
```

```
</head>
```

```
<body>
```

```
  <h1>This is heading</h1>
```

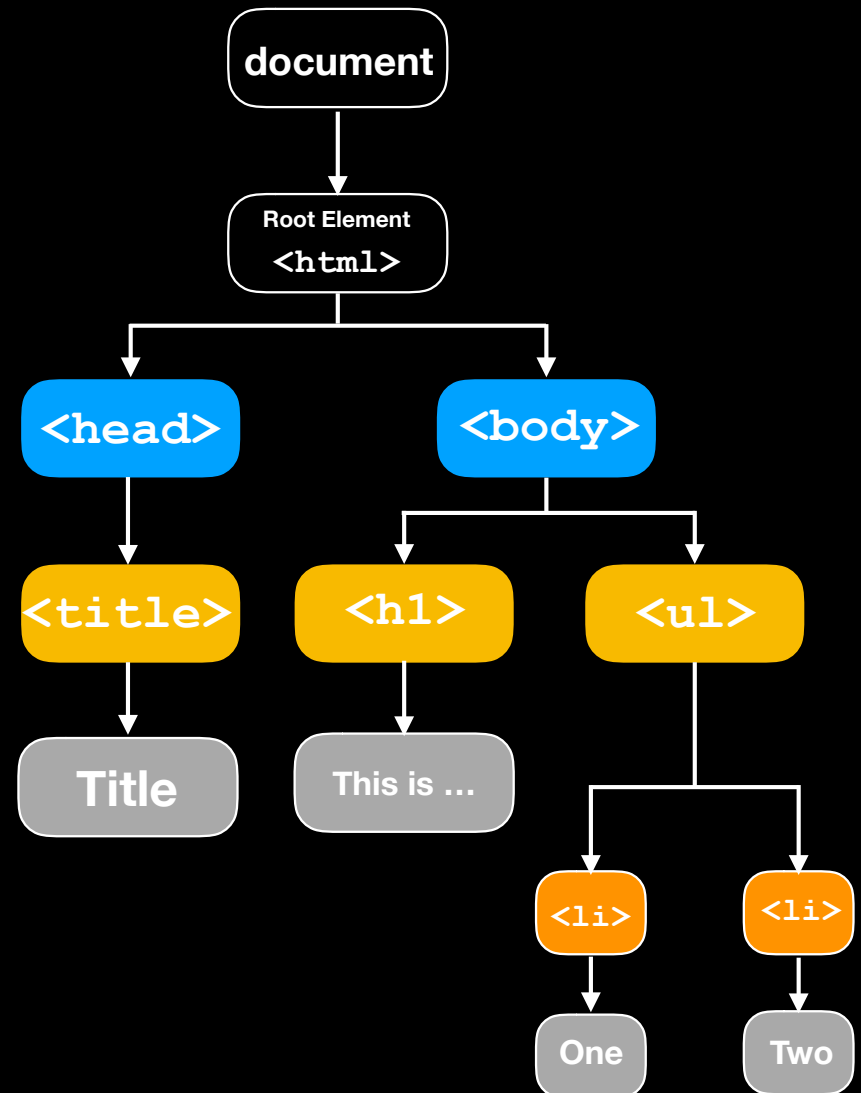

```
  <ul>
```

```
    <li *ngFor = "let model of models">  
      {{model.title}}
```

```
    </li>
```

```
  </ul>
```

```
</body>
```

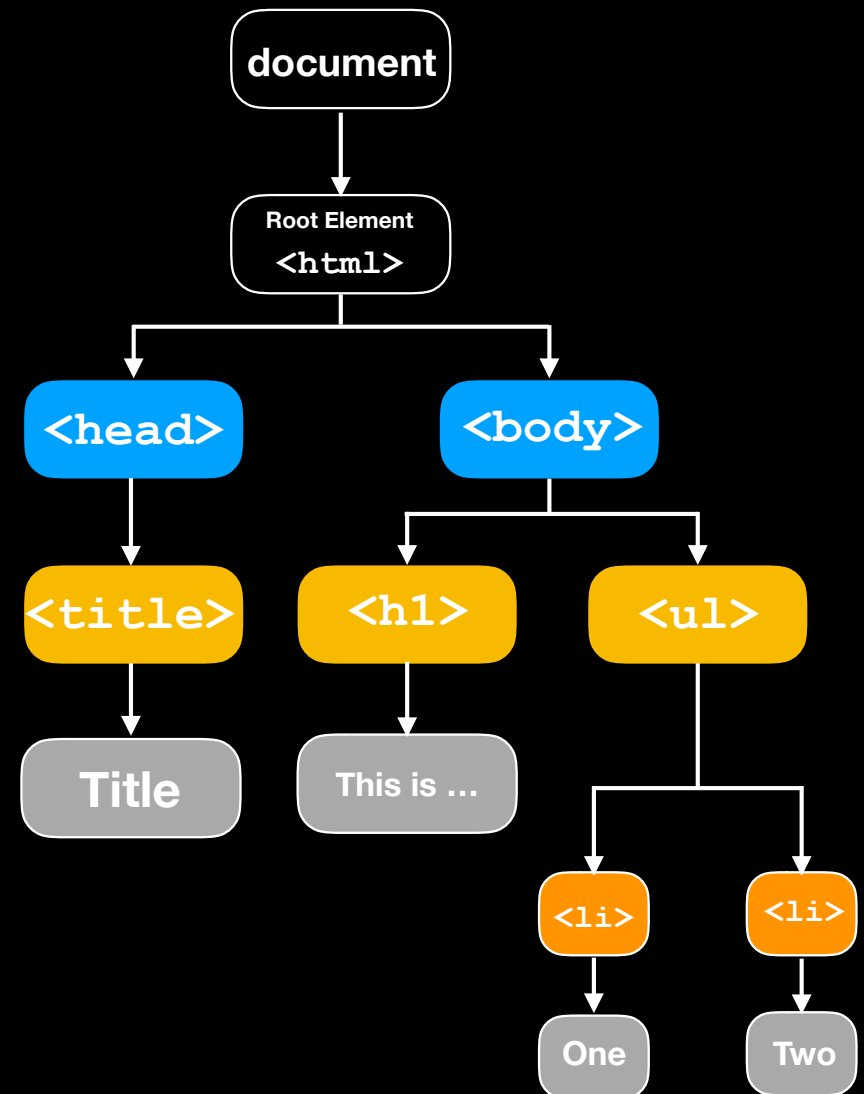

*ngIf Directive - True Condition

```
models = [  
  {title: "One"},  
  {title: "Two"}  
];
```

```
showList = true;
```

```
<html>  
  
<head>  
  <title>Title</title>  
</head>  
  
<body>  
  <h1>This is heading</h1>  
  <ul *ngIf = "showList">  
    <li *ngFor = "let model of models">  
      {{model.title}}  
    </li>  
  </ul>  
</body>
```

*ngIf Directive - False condition

```
models = [  
  {title: "One"},  
  {title: "Two"}  
];
```

```
showList = false;
```

```
<html>  
  
<head>  
  <title>Title</title>  
</head>  
  
<body>  
  <h1>This is heading</h1>  
  <ul *ngIf = "showList">  
    <li *ngFor = "let model of models">  
      {{model.title}}  
    </li>  
  </ul>  
</body>
```
